Project Name	Weather Wise
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The **AI WeatherWise API** focuses on solving the problem of accessing, processing, and understanding weather information efficiently. It provides weather data through an API and uses AI to convert complex weather information into simple and useful insights. This helps users and applications make better decisions based on current and forecasted weather conditions.

Purpose:

- Solve weather-related information problems** by providing accurate and easily accessible weather data.
- Improve user experience** by presenting complex weather information in a simple and understandable format.
- Provide faster access to weather information** through an easy-to-use API.
- Use AI-generated insights** to help users understand weather conditions and prepare accordingly.
- Understand user weather needs** and provide relevant information for activities such as travel, farming, and outdoor planning.
